[Bosch FMM-325A interruptor de alarma contra incendio Alámbrico Rojo:](#)

Las Estaciones Manuales Analógicas serie FMM-325A se usan en los circuitos de sondeo de las Centrales de Incendios FPA-1000-UL, D9024, D8024 y D10024A de Bosch

Security Systems, Inc. Se comunican con el panel de control (alimentación y datos) a través de un circuito de sondeo de dos cables.

La dirección de la estación manual en el circuito de sondeo se establece mediante la programación de un microchip EEPROM. Es necesario usar el Programador de Dispositivos Analógicos D5070 para establecer la dirección.

Todos los edificios comerciales usan estaciones manuales. Estas estaciones manuales permiten que las personas evacuen el edificio al iniciar una alarma. La central de incendios identifica el punto de alarma en el circuito de sondeo y la palanca de alarma se bloquea en la posición al tirar.
